

Risk Factors and Disruption Scores

Known Levels of Infection	Infection rate 0% of population; no deaths reported	Infection rate <0.001% of population; <5 deaths reported	Infection rate <0.01% of population; <50 deaths reported	Infection rate <0.1% of population; <500 deaths reported	Mass infections >0.1% of population; >500 deaths reported
Freedom of Mobility	Unrestricted movement internally and across international borders	Some restrictions on international movements	Localized internal and cross border movement restrictions	Large scale limitations on international and local movements	No international travel, strict controls on local movements
Availability of Critical Supplies	Full scope of goods and services available country-wide	Localized shortages and delays in supply apparent	Disruption to goods and services with acute shortages in specific areas	National disruption to most goods and services	Disaster level shortages, or a complete absence of supplies
Availability of Critical Utilities	All services and utilities working at optimal levels	Indications that some utilities and services may be disrupted	Some isolated and limited disruptions to utilities and services	Significant utilities and services disrupted for protracted periods	Major or complete cessation of utilities and services
Educational Institution Closures	Educational institutions fully operational with no restrictions	Indications that some institutions may be closed for short durations	Some isolated institutions and closed for protracted periods	Large scale closure of educational institutions for protracted periods	All educational institutions closed for an indefinite period
Public and Private Events	No disruptions to major public and private events	Limited disruptions to large scale events	Isolated cancellations or restrictions on mass gatherings	Large scale cancellations of mass gatherings	All mass gatherings prohibited or cancelled indefinitely
Availability of Medical Care	Unimpaired access to medical services	Access to [non-emergency] medical services affected	Disruptions to routine primary care. Acute support shortages	Routine care profoundly impacted. Emergency treatment only	A complete failure of health care services
Rule of Law	Police and military focused on primary responsibilities	Some police and military forces allocated to crisis response	Large scale deployments of police and military forces	Police and military forces struggling to function	Police and military forces ineffective or wholly absent
Effectiveness of Government	All levels of government working effectively	Some components of government under stress or disrupted	Government agencies struggling with noticeable disruptions	Multiple aspects of government breaking down	Government ineffective and unable to function and govern
Socio-Political Environment	The 'social contract' is effective – effective rule of law	Isolated and temporary increases in crime and social instability	Frequent episodes of civil disorder, some violent	Widespread and protracted increases in disorder with violence	Collapse of society, with near continuous civil disorder

Compounding Factors

Underlying Effectiveness of Government	Resilient, highly capable government institutions	Effective government and institutions	Generally sound government and limited range of infrastructures	Weak government and poor infrastructures	Poor government and weak or non-functioning infrastructures
Public Health Capacity and Capability	Sophisticated and extensive medical care and resourcing	Advanced and extensive medical care and resources	Sound medical care with good medical resources	Weak medical care with limited medical resources	Poor medical care with major resource gaps
